- **α & β Trading System: The Winning Strategy in the Stock and Crypto Markets**

Good morning, members of the community!

I'm Samuel Blackwood, so let's skip the formalities and dive right in! In this fast-paced world, opportunities wait for no one, they will not knock twice. When an opportunity appears before us, our job is to act decisively, not hesitate. Otherwise, it'll slip right through our fingers.

If you're finding it hard to make money in the market, perhaps the problem is that you see opportunities but are too slow to act. Friends, think about it, Bitcoin has risen from \$60,000 to \$90,000. With such profit potential right in front of you, why are others able to seize it firmly, while you keep missing out?

Stop making excuses. Investing has never been a game of waiting for returns, it requires sharp vision and decisive action. If you're unwilling to take risks and hesitate to make a move, those profits will naturally go to others! In the market, decisions are like driving a fast car—hesitating even for a second means missing the best entry point. You need to ask yourself: do you want to miss out again this time? Or will today be the start of a new beginning?

Our helmsman has repeatedly provided precise trading strategies, yet you continue to stand by idly, watching one opportunity after another slip away. The Bitcoin trading strategies offered by AlphaStream have shown such high accuracy, I believe you've witnessed its power and magic firsthand! Yet you still take no action? This is a clear opportunity, and your response seems to show no desire to make money! In the investment market, without the desire to succeed, how can you expect to see returns?

Wake up, friends, now is the best time to act. Don't let the next "gold mine" slip through your fingers! Right now, with this superheated crypto market, the first test of AlphaStream 5.0 will be a powerful catalyst for our community's QTM token. Folks, the opportunity is right in front of you, and time waits for no one—

act now! Don't hesitate—the time to act is now! Seize this opportunity, take bold action, and that's the first step toward success.

Every day, the market is filled with opportunities that could change your life. But hear me out: the key is not just in spotting these opportunities—it's in acting boldly and decisively! We can't wait for some "perfect moment" to arrive; sometimes, the perfect moment is something we create ourselves! So, what are you waiting for? Friends, it's time to roll up our sleeves, give it everything we've got, and chase the dreams that are ours for the taking.

We can't just be spectators in this game of life; we have to step up and become the true winners! Remember this: the only shot you'll regret is the one you didn't take. The opportunity is right here—let's act now and charge toward victory!

Yesterday, the three major U.S. indices saw a slight pullback as the excitement around the "Trump Trade" begins to fade, and the market returns to rationality. In terms of capturing the current larger trends, I believe the helmsman, Professor Quinlan Sutter, has already provided us with strategic direction. For stocks that have risen significantly, I recommend caution. Wall Street analysts

often publish bullish reports after significant price rises, and this is when we need to stay alert, especially with all three indices near highs. Before buying these stocks, make sure to assess whether the profit-to-risk ratio is balanced.

On the other hand, we should focus on stocks that are forming bottom patterns. Although these stocks may still carry some negative sentiment, as our helmsman, Professor Quinlan Sutter, says the formation of a bottom is often counterintuitive and takes time. When buying at the bottom, be sure to control your position—start with a small amount, keep a close watch, and only increase your holdings once a bullish rebound is confirmed. This approach helps secure higher profits.

Why recommend adding positions only after the bullish trend is confirmed? Because there are many stocks in the U.S. market. If you've bought a stock at a low level that has seen a significant drop but its bullish reversal hasn't been confirmed, adding more recklessly could lead to capital being tied up long-term, causing you to miss other opportunities. Proper capital allocation and avoiding idle funds are essential strategies for every investor.

With the current market offering diverse investment opportunities, especially the clear opportunities in the crypto market, such as our community's QTM token, the potential for appreciation is something we should focus on and participate in. Diversifying investments not only mitigates risk but also captures growth potential across different markets. Therefore, I recommend that everyone, while paying attention to traditional markets, actively participates in the investment opportunities within the crypto market.

Remember, the key to investing is rational judgment and flexible response. Let's stay in sync with the market pulse and pursue steady investment returns.

Today, I've shared a lot of my heartfelt thoughts. I'm straightforward by nature, and I genuinely hope each community member can succeed in their investments, rather than repeating old habits. Only by continuously adjusting ourselves can we win in the future! When helmsman, Professor Quinlan Sutter invited me to share, I thought about it for a long time—I wanted to bring something different, something practical, simple, and highly accurate. Therefore, I've incorporated the α & β trading strategy into real trading examples, sharing them with you in real time, hoping to truly assist those who enjoy short-term trading.

Because we all know, many stocks look impressive on technical indicators after they've risen, but before they rally, few people can identify them as opportunities. There are plenty of analysts in the U.S. market, but only a few have become wealthy through investing—talking and doing are two different things. The true measure of an investor's ability is the extent of trading gains! In this regard, I highly admire the helmsman's approach. He has an exceptional skill for establishing investment strategies. For instance, as Bitcoin rose from \$60,000 to \$90,000, helmsman had already led community members to start positioning below \$60,000. Yet, some friends saw the opportunity but didn't act and missed a great chance.

For those who enjoy short-term trading in the stock market, the α & β trading strategy will bring you an unprecedented experience. It's not just a technical indicator, it's our "trump card" for taking the lead in a volatile market. Seizing it might just be the breakthrough you need in your investment journey!

QTM COMMUNITY

Let's continue from yesterday's discussion! Among the three stocks shared yesterday, WIX and AFRM especially meet the $\alpha&\beta$ trading strategy's buy conditions and can be bought during a pullback. With the slight adjustment in the market yesterday, let's monitor their performance today and see if they continue the anticipated upward trend.

Here, I'd like to remind everyone of a core principle—the $\alpha&\beta$ strategy employs a right-side entry, essentially looking for the main bullish wave. If a stock's fundamentals continue to show positive momentum, it often leads to a considerable upward trend. But remember, individual stocks are affected differently by market sentiment, so a diversified approach is more suitable.

While technical patterns can serve as references in the stock market, they're not as strong as sentiment and performance drivers. There are many stocks with good technical patterns, but most don't achieve significant gains because they lack strong follow-up momentum—this is far simpler in the crypto market. So, folks, thoroughly assess the background and logic, don't just focus on the technical chart.

The main bullish trend in the α & β trading strategy has a few key conditions:

1. MA5 crossing above MA20—a strong bullish signal.
2. Breaking the high on the left side of the daily candlestick chart, confirmed by a strong bullish candlestick close—this is our best confirmation signal to enter.
3. A pullback that doesn't break the neckline and lasts no more than four trading days—if it breaks the neckline, exit decisively, no holding for the long term.

The current trends in these three stocks clearly align with our expectations.

Let's see in the coming days if they continue to rally as anticipated.

In the crypto market, Bitcoin's powerful surge is the best validation of the α & β trading strategy's accuracy. Seeing its rapid rise, remember that the strategy is backed by a series of rigorous logic and confirmation signals—this is what keeps us winning in the market.

From the BTC/USDT daily chart, we can clearly see that after the MA5 crossed above the MA20, Bitcoin continued strongly, breaking the previous high on the left side with a strong bullish candlestick close, confirming the buy signal, and then rallied for six consecutive days. This is the power of the α & β trading strategy in the crypto market! Of course, technical charts only confirm the buy signal, while continued price increases depend on strong market sentiment and policy catalysts.

As investors, we all know that confirming technical signals is key, as your entry point determines your confidence in holding the position, while your exit point locks in profits. Although the α & β trading strategy is not as systematic and automated as AlphaStream 5.0, it has been invaluable to me, helping me achieve excellent results. All this is thanks to the navigator's optimizations, which have allowed me to unlock maximum value from this system.

In this community, I've seen many friends achieve their dreams through investing, improving their financial situations. And now, we're facing a powerful new trading tool that could completely change our investment habits: AlphaStream 5.0! This afternoon, this system will undergo its first test, bringing an unprecedented strategy tool to the market. This is an opportunity not to be missed—are you ready?

QTM COMMUNITY

So here's the question, folks: if we apply the α & β trading strategy to QTM token—does this mean we're about to see a new bullish breakout?

That's all for our session this morning, folks! Be prepared, and look forward to the official launch of the exciting test this afternoon!

Good afternoon, my friends!

I'm Quinlan Sutter, your old friend. Recently, I watched an interview with Elon Musk, and it was truly impactful. He said we must remain optimistic about the future because pessimism won't bring any benefits; it only traps us in negative energy. He'd rather choose optimism, even if it might be wrong, than choose pessimism, even if it might be right. At least by standing on the side of optimism, you'll see more possibilities. If you're pessimistic, not only will you

feel miserable, but life also loses its brightness. Yes, human civilization will eventually reach some kind of end, as will the fate of the universe, but that doesn't stop us from cherishing every moment and finding meaning along the journey.

In the world of investing, we encounter ups and downs and uncertainties every day—we may feel disappointed by a temporary loss, worry over falling stock prices, or feel deep regret after missing an opportunity. But if we don't manage these emotions well, it's easy to lose our way. As mature investors, we can't let these negative feelings hold us back. Only by staying positive and optimistic can we overcome human weaknesses, see the bigger trends, and seize true opportunities.

So, what I want to say is that no matter how the market fluctuates, staying optimistic and responding proactively is the most valuable asset on our investment journey. Because in this process, we are not only pursuing wealth but also exploring the meaning of life. Along the way, we must continuously grow and surpass ourselves, embracing each future opportunity with confidence and hope.

In our QTM community, we have countless friends hoping to change their destiny through investing, as well as many partners who see trading as a life passion. Whatever your goal may be, a love for trading is key to achieving success in the market. I'm very grateful for Samuel Blackwood's presentation today; his insights deeply resonated with me. His continually optimized α & β trading model has reached near perfection, and I believe that through Samuel Blackwood's technical sharing, everyone's skills in short-term trading and trend strategies will be greatly enhanced.

If you have any questions while learning Samuel Blackwood's techniques, don't hesitate—add his contact information. In my experience, Samuel Blackwood has always been someone who's willing to help. His success brings me joy, not only because of his achievements in investing but also for his passion for giving back to society. In our last offline community charity event, he generously donated \$1 million, spreading the power of love through his actions!

Let's continue to grow together in this community, pursue success, and at the same time, remember to be grateful, passing on love and support to more people.

After a slight pullback in the three major indices yesterday, today saw a modest rebound. The October CPI data released this morning met expectations, with U.S. CPI increasing by 2.6% year-over-year in October, slightly up from 2.4% in the previous month and marking a three-month high. Core CPI remained unchanged at a 3.3% year-over-year increase, with a monthly increase of 0.3% for the third consecutive month. With the CPI data now in, the market's expectations for a Fed rate cut in December have further strengthened. Against the backdrop of a weak labor market, short-term data fluctuations are unlikely to alter the Fed's rate path.

All of this means that the movements of the dollar, U.S. stocks, and gold will continue to be driven by expectations surrounding Trump's policies. Since Trump's election victory, confidence in U.S. economic growth has noticeably increased, risk appetite has risen, strengthening both the dollar and U.S. stocks, while gold prices face downward pressure. At the same time, there are concerns about inflation rebounding due to Trump's potential future policies, particularly price increases that could be triggered by trade tariffs.

Recently, a survey by Bank of America indicated that Trump's election could limit the Fed's room for rate cuts, and the dollar is expected to outperform the

broader market in 2025. Regarding the outlook for U.S. stocks, some institutions hold a cautious stance. Bridgewater Associates recommends that investors reduce additional investments in U.S. equities and instead focus on popular assets such as bonds and the crypto market.

This perspective aligns closely with my recent strategy. Apart from positioning in some undervalued, oversold stocks, the large-cap companies that have risen significantly are no longer appealing, while hot sectors like the crypto market are showing greater opportunities. If you're still looking for future investment directions, now is the time to dive deep and seize the growth potential in the crypto market.

Friends, I'm thrilled to announce some exciting news—our long-awaited first global test of AlphaStream 5.0 will officially launch this afternoon! This is not only a major milestone for the community but also the beginning of a new investment journey for us. In speaking with some of the selected members, I've noticed that a few people are still not fully familiar with the test rules and guidelines. Therefore, this afternoon, I'll be providing a detailed walkthrough of the test details to ensure everyone is fully prepared and can participate smoothly.

Starting tomorrow morning, the first trading test for AlphaStream 5.0 will officially begin! What makes AlphaStream 5.0 so powerful? Only by participating and experiencing it firsthand can you truly understand the unique advantages it offers. We've been preparing for a long time to ensure this test goes smoothly.

Last week, we also had in-depth discussions and reached an agreement with the sponsors of this event. They are significant partners of our QTM community, not only strong in resources but also rich in social responsibility. Notably, they hold compliance certification from the Financial Crimes Enforcement Network (FinCEN) under the U.S. Treasury, ensuring they are firmly rooted in the industry. FinCEN certification not only provides compliance assurance for our test but also further strengthens our confidence in the crypto market.

Even more exciting is that they are about to launch a \$5 billion special fund program designed to provide our community members with a platform for growth and development. This support will help us grow together and achieve even greater goals. Friends, the first test of AlphaStream 5.0 is right in front of us—let's dive in together and witness a brilliant future!

Of course, I can't fully convey their excellence and support in just a few words. As it says in Ecclesiastes: "Whatever your hand finds to do, do it with all your might, for in the realm of the dead, where you are going, there is neither working nor planning nor knowledge nor wisdom." Today, each of us is carrying a strong conviction, actively engaging in this AlphaStream 5.0 test, facing every challenge, and seizing every opportunity. Let's give it our all to achieve our shared dream without regrets and together create a glorious future!

Great news! They have provided us with 1,000 test accounts, each funded with \$500. This is a rare opportunity. While I'm highly confident in AlphaStream 5.0's preselected strategies, with a success rate of 95% and even 99%, I still have some concerns about the trading execution of some friends. I hope everyone can fully cooperate, focus, and enhance their responsiveness during the test. Only through our collective effort can we truly unlock the full potential of AlphaStream 5.0 and experience the extraordinary impact it offers!

This is undoubtedly a very significant benefit!

- 1. The test will officially begin tomorrow morning, with a target return of over 60% within one week!**

- 2. Any profits you earn through this exclusive account can be withdrawn directly; if there are losses, don't worry—the sponsor will cover all losses.**

Since spots for this test are limited, I will prioritize those who actively signed up and are top scorers. This is an exceptional opportunity, and I look forward to seeing everyone enthusiastically participate and seize this rare growth opportunity through action!

If you haven't yet signed up through my assistant, please do so quickly to ensure your chance for this or the next round of testing. In the investment market, opportunities always favor those who are thoroughly prepared. If you've secured a spot in the test, make sure to download the trading software today, familiarize yourself with the trading rules and guidelines, and get ready for tomorrow's AlphaStream 5.0 test.

As long as the test accuracy reaches over 96%, our first test will be a complete success. This is a rare opportunity—let's work together and embrace this exciting challenge!

Test Target:

With the crypto market receiving the highest overall rating, AlphaStream 5.0 has shown outstanding data performance in this market, making it our top choice for testing. The continuous 24/7 movement provides a more precise strategic foundation for AlphaStream 5.0, enabling the system to excel even further in real-time market conditions.

Test Period and Profit Target:

The test period is set for 3-7 days, with a goal of achieving a total asset return of at least 60%!

Slots and Internal Test Funds:

This test is limited to 1,000 participants. Each participant will receive \$500 in test funds, fully sponsored by our strategic partner, COINIXIAI. This is a high-quality company with substantial strength, providing solid support and assurance for this test.

From my strategy, you may have noticed that I take a conservative stance in many areas. This test is of immense significance to us—it involves the

AlphaStream 5.0 system, valued in the billions. We need to ensure that the system not only performs well for institutions but also delivers the same results for retail investors. Therefore, I've adopted a conservative plan to ensure the test's smooth completion.

For those who didn't make it into the test, you're welcome to observe and learn; those who have signed up will receive priority for the next major initiative. Friends who haven't signed up yet still have the chance to register and increase your opportunity to participate! This is a unique experience—let's witness the power of AlphaStream 5.0 together!

Our sponsor has not only received regulatory certification from the Financial Crimes Enforcement Network (FinCEN) under the U.S. Department of the Treasury, but excitingly, they are also planning to go public on NASDAQ! This is undoubtedly significant positive news for us, further boosting our confidence and the value of our collaboration.

Additionally, they are committed to building a high-quality IDO platform, providing us with valuable investment and partnership opportunities. For

instance, our QTM token was launched through this platform. In the AI field, we are also closely aligned with them. To further advance this sector, they plan to establish a \$5 billion special fund focused on supporting AI-related projects. This not only offers an excellent stage for talented members of our community but also brings us boundless possibilities.

Fund Usage and Allocation Rules

- After the test ends, if there is a loss in the test funds, there is no need to repay the lost amount—simply return any remaining funds.
- If you are in a profitable position, you only need to return the principal amount, and the profit portion can be withdrawn at any time to your crypto wallet or bank card.

My assistants have already notified the selected participants, distributed the accounts and test funds, and ensured that each participant is familiar with the operational process. If there is anything unclear during the operation, please feel free to contact an assistant for clarification. For those who have not yet received notification, please contact an assistant to confirm your selection status. If you were not selected, kindly be patient and wait for the next opportunity.

Once the test begins, I will follow AlphaStream 5.0's system prompts to select the most reliable trading strategies and signals. The trading signals are expected to be limited to no more than twice per day. This is a rare opportunity—let's experience growth together through a steady approach, and I look forward to your active participation!

To ensure that each trading signal is executed strictly, I will have my assistant send real-time trading signals to the selected participants via our Telegram channel. I strongly recommend that everyone follows our strategy and executes promptly. After completing each trade, please share a screenshot of your trade in the group.

Due to time constraints, I'll continue to share more details each day. I'm confident that, through our combined efforts, this test will achieve outstanding results!

The whole world is watching the explosive rally in the crypto market; it's climbing like a beast, but few tell you how to trade and buy in correctly. This afternoon, I'll be sharing a simple and practical trading strategy: the daily low-point upward shift buying method, using minimal stop-loss to aim for maximum profit.

Please look closely at the chart above. After a six-day decline starting on November 4, the market stabilized and began to rebound. As of yesterday, the daily candlestick chart has shown eight consecutive days of higher lows. In the current bullish trend, the market is strongly advancing with a target toward \$100,000. The key is choosing the right entry point—November 9, 10, and this morning all presented excellent buying opportunities. Especially this morning: yesterday's low was around \$85,000, and today's low is around \$86,120. If you entered at today's low and set a stop-loss at \$85,000, this is an ideal buy strategy. A break below \$85,000 could indicate an incoming correction, but if it holds, the push toward the \$100,000 milestone continues.

Mastering this trading technique and the logic behind it will make your operations in the crypto market effortless. Of course, if you don't have time to monitor the market, AlphaStream 5.0's fully automated trading mode will be your

best assistant, automatically selecting the optimal signals to trade and helping you capture every opportunity. Tomorrow, we will officially unveil the mysteries of AlphaStream 5.0—stay tuned!

Isn't it amazing, this kind of price movement? Such a simple buying strategy brings daily buying opportunities in QTM token. As long as you take action, returns will naturally follow. On the other hand, if you hold onto a pessimistic attitude, the abundant profits in the crypto market may slip away from you. Don't assume that just because you missed opportunities or didn't make money in the stock market, the same applies to the crypto market—these two cannot be compared, as there are many different factors at play.

Friends, believe me—the cost of missing out is often much greater than the cost of trial and error. The final outcome depends on your own choices! This is a moment to seize the opportunity; face it boldly!

Learning Achievement Points

- 1. What are the core points of the α & β trading strategy shared by Samuel Blackwood this morning?**
- 2. What specific components are included in the AlphaStream 5.0 testing phase?**

Please answer thoughtfully and showcase your learning achievements!

Alright, that concludes our discussion for this afternoon. Let's look forward together to tomorrow's important moment and step into a brighter future! See you tomorrow, friends!
