Sharing Topics:

- **“ α & β ” Strategy: Signs of Adjustment as Strong Stocks Lose Momentum.**
- **The Significance of AlphaStream 5.0’s Successful Testing.**

Good morning, community members!

I’m Samuel Blackwood. A new week has begun! Friends, do you feel that fresh energy? Like Helmsman Quinlan Sutter, those who love trading often find holidays tedious. That passion for trading has become embedded in the soul. But now, with the initial testing of AlphaStream 5.0 underway, things are going to get increasingly exciting. If you have the time to trade, it’s a 24/7 opportunity with no breaks throughout the week. However, I still recommend focusing on major market movements driven by impactful data for maximizing profits.

Monday is definitely a fantastic opportunity—a time to reset, reorganize plans, and refocus. The investment world waits for no one; opportunities always favor those who are prepared. Today, let's go back to the basics and reassess our trading strategies. Ask yourself: Does this plan position me to seize the next opportunity? Markets change rapidly, but one thing never changes—the need for a keen sense of trends and the courage to act decisively.

Last week, the much-anticipated AlphaStream 5.0 began its initial testing. Under Helmsman Quinlan Sutter's guidance, we achieved a total asset return rate exceeding 40% across just three trades! Friends, this is quite an impressive achievement!

AlphaStream 5.0 Internal Test Learning Plan Transaction Records								
Rules:								
1.Initial capipati:\$500 testing fund								
2.Test cycle:3-7 days								
3.Total assets compound growth rate target:more than 60%								
Date	Transaction Type	Direction	Number of trades	success rate of trades	Profit Ratio	Cumulative Return Rate	Total Assets Growth	Account capital growth rate
11/13/2024	/	/	/	/	/	/	\$500	0.00%
11/14/2024	BTC/USDT-100X	Short	1	100%	68%	68.00%	\$568	13.60%
11/14/2024	BTC/USDT-100X	Short	1	100%	65%	133.00%	\$633	26.60%
11/15/2024	BTC/USDT-100X	Long	1	100%	71%	204.00%	\$704	40.80%

Looking closely at these three trades, one detail stood out that truly amazed me: AlphaStream 5.0 prioritizes signals with over 95% accuracy when pushing trading alerts. Isn't that incredible? What's even more fascinating is that it can be set to fully automated trading, eliminating the stress of constant monitoring. The power of this technology is truly breathtaking!

This morning, I'll continue to closely monitor AlphaStream 5.0's signals. If high-quality trading opportunities arise, I'll notify everyone immediately. Let's seize these opportunities together and push our returns even higher!

Taking the Dow Jones Industrial Average as an example, last week I mentioned that Powell's comments about delaying rate cuts became the catalyst for this wave of corrective adjustments at current highs. The market has finally found sufficient reasons to release technical risks. High-level consolidation naturally struggles to attract significant outside capital, and the inability of previously strong stocks to maintain momentum has further hinted at an impending adjustment.

As Helmsman Quinlan Sutter mentioned, the unfilled gap left by previous bullish gaps must be corrected. Otherwise, it will hinder future upward movements. While this adjustment creates short-term pressure, it is a necessary part of a healthy market in the medium and long term. Capitalizing on these adjustments will be the key to our next steps!

Last week, we used the α & β strategy to track two stocks that were breaking out of consolidation into upward movements. Despite the choppiness, these stocks maintained absolute bullish patterns. Observing the daily candlestick charts, the closing prices remained above the breakout levels. As long as they don't close below these levels for four consecutive days, the uptrend has a strong chance of continuing. However, if even these strong short-term stocks fail to rise, it could indicate an acceleration in market rotation. In such cases, short-term opportunities will become scarcer, and the wisest choice for investors is to remain patient and await the next wave of opportunities brought about by sector rotations. Remember, the market always rewards those who understand the value of waiting and striking when the time is right!

Amidst the current high-level volatility and decline in the stock market, QTM Token has shown remarkable stability. From a technical perspective, the bulls are advancing with a perfect upward trajectory exceeding a 45-degree angle. Almost every pullback to the MA5 presents an excellent buying opportunity. Previously, I shared with you that QTM Token's first target is above \$10. Currently, it has securely surpassed \$5, remaining a great buy-on-dip opportunity.

It is important to note that the rise of QTM tokens is more suitable to be viewed with a mid-term perspective. Why? There are three main reasons:

1. AlphaStream 5.0 Testing Phase Gains: This has injected robust confidence into the market.

2. **“Crypto President” Policies Expected by 2025:** These will provide long-term support for future price increases.
3. **AlphaStream 5.0’s Scheduled Launch in March Next Year:** This major event will further amplify bullish sentiment.

With these overlapping positives, I firmly believe that QTM Token reaching \$15 is entirely within reason. Friends, the market opportunity has never been clearer. If you don’t seize it now, you’ll regret it!

Important Notice:

AlphaStream 5.0 has issued a trading signal on CBF/USDT. For first-time participants, please get ready. Assistants will send the signal to the Telegram group shortly—ensure you execute the strategy precisely.

Ever since I joined QTM community, many have asked, "How can I earn my first million dollars?" Let me start with some data: among over 300 million Americans, there are more than 20 million millionaires. Interestingly, most of them didn't inherit wealth, over two-thirds built their fortunes from scratch as entrepreneurs. I count myself among them.

For most people, building wealth begins with entrepreneurship. However, when your business hits a plateau, many companies face decline, a fate tied to the cyclical nature of industries. So, how do you ensure your assets continue to grow, free from industry cycles? The answer——INVESTMENT.

Investment is the cornerstone of maintaining and growing wealth. By making wise investments, you can break through the limitations of business cycles and allow your wealth to grow unfettered. This is where QTM community shines, providing in-depth market insights and professional investment strategies to help you make better decisions.

Friends, don't rely solely on your business income——diversify your investments and make your money work for you! If you're not currently an entrepreneur but instead working a job, focus on saving and investing to grow your wealth over time. This might be your best chance to become a millionaire.

Whether you're running a business or climbing the corporate ladder, the key lies in identifying the right investment channels to maximize every dollar's value. Stay committed and optimistic, friends! Let's chase our financial goals together and achieve unparalleled success!

Wow! What a spectacular trade! Bollinger Bands and MACD indicators used by helmsman Quinlan Sutter have proven their incredible power once again. In under 60 minutes, returns have soared past 80%! This marks the fourth trade with a perfect 100% success rate.

AlphaStream 5.0 system will continue to demonstrate its astounding accuracy, reaffirming its exceptional capabilities. Friends, don't forget to share your profit screenshots later! These results highlight that we're witnessing the future of investment technology.

A wonderful week starts now—are you ready to embrace this good fortune?

A few friends have asked me about what is stablecoins? The concept is quite straightforward! Common examples like USDT and USDC frequently appear in crypto trading pairs, such as BTC/USDT, ETH/USDT, or CBF/USDT. But what exactly are stablecoins?

Simply put, stablecoins are the “universal currency” of the crypto market, much like the U.S. dollar is globally. They can be thought of as digital tokens

representing dollars. Investors need stablecoins to trade crypto, just as international investors exchange their local currency into dollars to trade U.S. stocks. In this role, USDT acts as a vital bridge, facilitating widespread currency flow in the crypto market.

Stablecoins' defining feature is their price stability. Unlike Bitcoin or Ethereum, which are highly volatile, stablecoins aim to maintain a 1:1 value with the U.S. dollar, earning them the label "stable." This stability makes USDT and USDC the go-to mediums for virtually all crypto trades.

Beyond trading convenience, stablecoins offer a critical advantage: they are ideal for cross-border payments and transfers. Compared to traditional international bank transfers, stablecoins are faster, more efficient, and less expensive. Whether for personal remittances or international transactions, stablecoins provide a highly effective solution.

If you're considering entering the crypto market, buying stablecoins is an excellent starting point. They not only make trading more flexible but also open the door to the world of crypto investments. Stablecoins aren't just the universal

tool of the crypto world—they're reshaping global payments. If you haven't explored stablecoins yet, now is the perfect time to learn!

Many of you have signed up for the AlphaStream 5.0 initial test, but due to limited slots, some are waiting for the second round of tests. The good news is, over the weekend, helmsman Quinlan Sutter has been in urgent discussions with sponsors, and we're hopeful for updates this afternoon.

What does AlphaStream 5.0's successful testing mean for our community? Let me tell you—it's monumental! Those familiar with helmsman Quinlan Sutter know his leadership is both visionary and meticulous. This test demands zero errors for approval, underscoring his high standards. A quantitative trading system valued at over \$100 million, once validated, will be directly applied to our Trading Bootcamp, definitely a game-changing advantage to all participants.

Friends, you have to understand, Trading Bootcamp isn't just about theoretical learning—it's about hands-on, real-world trading to generate profits. Last session, many participants achieved remarkable investment results and AlphaStream 5.0 is like an ultra-precise sniper rifle—before heading into the real market battlefield, all participants must first master its operation through

rigorous testing. Only then can you navigate the market with precision, capturing every opportunity.

Therefore, friends who have registered for this training camp must seize the opportunity to participate in the AlphaStream 5.0 test! Strong execution is the foundation of profitability. Do you want to see your name on the leaderboard? Do you want to achieve your financial goals? Now is the perfect time to take action!

Folks, this is your chance to change your trading destiny and achieve monumental success—don't let it slip through your fingers!

AlphaStream 5.0 test will only be deemed successful upon achieving a 100% success rate—a promise helmsman Quinlan Sutter has made to everyone. If you haven't registered yet, seize this moment and contact the assistant to secure your spot! Don't let this once-in-a-lifetime opportunity slip through your fingers. Opportunities like this are rare and come with immense rewards!

Sharing Topics:

- 1. Trump's Momentum Cools, NVIDIA Sparks Market Storm This Week**
- 2. Latest Developments in AlphaStream 5.0's Second Test**
- 3. Money Never Sleeps: AlphaStream 5.0 Unlocks New Opportunities in the Crypto Market**

Good afternoon, my friends!

I'm Quinlan Sutter, your old friend. First, I want to thank Samuel Blackwood for the fantastic share this morning, which allowed us to truly experience the power of professionalism and the brilliance of wisdom! What's even more exciting is that those who participated in the AlphaStream 5.0 test for the first time successfully achieved 100% profit on each trade thanks to the system's precise guidance. This is not just a breakthrough in data, but also an improvement in confidence!

Opportunities are always reserved for those who are prepared. This test has once again proven that success in the market is never accidental; it comes from planning ahead and executing decisively. If you've already recognized the potential of AlphaStream 5.0, now is the best time to take action. Don't let hesitation be the barrier that holds you back!

As the post-election rebound in the U.S. gradually fades, the stock market saw a significant drop last Friday. The boost from Trump's victory and the Federal Reserve's interest rate cuts is dissipating, and market sentiment seems to be wavering. Since Election Day, the stock market's rise had been driven by expectations of Trump's economic policies—lower taxes, deregulation, and increased trade barriers, even spilling over into the crypto market. However, investors are now beginning to calmly assess the potential risks that Trump's return to the White House could bring.

The market is focused on several key events this week:

Nvidia Earnings Report

On Wednesday, Nvidia, a leader in the AI sector, will release its earnings report. This will serve as a key test for whether the AI-driven rally is sustainable. Nvidia's stock has surged nearly 200% this year, contributing significantly to the

S&P 500's performance. However, investors are concerned that the market's expectations for AI may have already outpaced what is realistically achievable. If Nvidia's earnings fall short of high expectations, it could trigger a new wave of market volatility.

Global Monetary Policy Updates

Speeches from Federal Reserve officials will provide more policy clues for the market, while inflation data from the Eurozone and the UK will influence the next steps for the European Central Bank and the Bank of England. Investors will closely monitor how these data points affect monetary policy, especially against the backdrop of a global economic slowdown.

Trump Administration Updates

Key appointments in the Trump administration continue to attract market attention, particularly the nomination for Secretary of the Treasury, as it directly impacts future economic policy direction. Meanwhile, Trump's nomination of a vaccine skeptic for Health Secretary has already shaken the healthcare sector, and uncertainty remains high moving forward.

The current market is a crucial moment for calm evaluation and proactive positioning. Opportunities always favor those who act decisively, not those who hesitate and wait. Seizing the current opportunities with certainty is essential for staying undefeated in the market. As for the bottom strategy positions we've taken, there's no need to be swayed by short-term fluctuations. Sticking to the strategy is the key to success in the long run. The opportunities in the crypto market are even more of a highlight that can't be missed right now. The more complex the market, the more it tests our confidence and patience. By adopting a global perspective and using institutional-level thinking to plan for the future, we can ensure stable profits in the current market.

Remember, the market is dynamic, but success belongs to those who are willing to navigate the waves with calm and wisdom. Now is the best time for you to take that step!

Taking the Dow Jones as an example, after last week's correction, we may see a slight rebound at the beginning of this week. However, it's important to note that the gap left by the upward gap still needs to be filled. The real buying opportunity often lies near this gap-fill level. This is the key to accurately capturing opportunities.

At the same time, there are still short-term trading opportunities in strong stocks within the current market. If you're interested in short-term trading, don't miss Samuel Blackwood's insightful share. Take AFRM, a stock selected using the " $\alpha&\beta$ " strategy, for example. It performed exceptionally well today, rising nearly 10%, once again showcasing the precise advantage of the " $\alpha&\beta$ " strategy in identifying strong short-term stocks.

This weekend has been particularly busy for me. In addition to being a guest at two investment conferences, I also had an urgent negotiation with the sponsors of the first AlphaStream 5.0 test. After relentless efforts, we finally secured some additional test experience spots for the community! But honestly, this might still not be enough to meet everyone's needs, as we have so many friends in the QTM community, and their enthusiasm has exceeded our expectations.

The AlphaStream 5.0 test is a once-in-a-lifetime opportunity, and it could be the game-changer that transforms your investment journey! As it says in the Gospel of Matthew, "Everyone who seeks, finds; and to him who knocks, it will be opened." Opportunities always belong to those who take action early and are well-prepared.

So, I sincerely advise every community member not to hesitate—seize this rare opportunity and sign up for the test right away. Don't wait until the spots are full and regret missing this chance to elevate your investment game! The opportunity is right in front of you, and your choice will determine your future!

AlphaStream 5.0 Internal Test Learning Plan Transaction Records								
Rules:								
1.Initial capipati:\$500 testing fund								
2.Test cycle:3-7 days								
3.Total assets compound growth rate target:more than 60%								
Date	Transaction Type	Direction	Number of trades	success rate of trades	Profit Ratio	Cumulative Return Rate	Total Assets Growth	Account capital growth rate

11/18/2024	CBF/USDT-100X	Long	1	100%	102%	306.00%	\$806	61.20%

The two core indicators of the AlphaStream 5.0 system—MACD and BOLL—have shown impressive results in real-world applications! Through big data calculations, AlphaStream 5.0 combines comprehensive indicators and candlestick chart time points to accurately generate trading signals. Test participants only need to focus on improving their execution and ensuring they follow the trading signals closely to maximize their opportunities.

This morning, we received the 4th AlphaStream 5.0 test signal, and so far, 4 trades have been completed. One standout asset is the native token CBF/USDT from the Coinixiai trading platform. Only high-quality trading platforms launch such star assets, much like a star player on a sports team. For example, the

world's largest exchange, Binance, also has its own native token. These types of assets often have excellent trading value due to their star effect.

It's especially worth noting that, based on test data, CBF's volatility is sometimes higher than BTC, offering more trading opportunities. For example, last weekend, BTC had lower volatility, and there were fewer trading opportunities. However, native tokens like CBF stood out due to their higher volatility and became the focus of trading. Friends, this is the perfect time to boost your returns. Focus on CBF, seize its trading value, and take advantage of every AlphaStream 5.0 signal!

Important notice:

AlphaStream 5.0 has issued a trading signal for BTC/USDT. Friends participating in the test for the first time, please be ready. The assistants will send the trading signal to the Telegram group shortly. Please follow the trading strategy strictly.

On Wall Street, there's a long-standing saying: "Money never sleeps." It's not just a line from a movie, but a true reflection of every investor. Whether it's sunrise or sunset, somewhere in the world, markets are always in motion, and

opportunities are always waiting to be discovered. True investors understand that the essence of money lies in liquidity and efficiency—every penny should flow to where it can generate the most return.

In the pursuit of maximizing profits, time cost and opportunity cost are two key factors we must always focus on. Time cost is not just the value that money accrues over time, but also the price of your choices. Every second your capital stays in inefficient assets could mean missing out on high-return opportunities. As mentioned in the Book of Ezekiel: "When I say that the righteous shall surely live, if he trusts in his righteousness and acts unjustly, none of his righteous deeds will be remembered." This reminds us that past successes cannot be an excuse for stagnation. Every investment decision needs constant review and adjustment, and dwelling on the past will only cause us to miss opportunities in the future.

Opportunity cost is an unavoidable price in the fast-paced market. When you choose one investment, you're simultaneously giving up other potential returns. In financial markets, hesitation and waiting can be the most expensive mistakes. As the Book of Proverbs says: "The eyes of the wise are in the house of

mourning, but the fool walks in darkness." Investors must stay sharp and seize hidden high-return opportunities, rather than missing out due to indecision.

In the current crypto market, Bitcoin is undoubtedly the hot topic. We recommended buying Bitcoin when its price reached \$60,000, predicting it would surpass \$100,000 within three months. However, just two months later, Bitcoin's price broke through \$90,000, quickly delivering substantial returns to those who acted decisively. The expectation of Bitcoin hitting \$100,000 has sparked excitement across the entire crypto market, creating huge opportunities for proactive investors.

But I've also noticed that many friends chose to wait and missed out on this profit wave. It reminds me of an important question: When an opportunity is right in front of you, do you have the decisiveness to seize it? The market doesn't wait for anyone, and success will only belong to those who are alert, decisive, and know how to plan ahead.

Friends, money never sleeps, and opportunities never wait. If you're still hesitating, now is the best time to take action!

In QTM community, I always remind everyone of an investment truth: In this fast-changing market, the cost of trying and making mistakes is far lower than the cost of missing out on opportunities. The essence of investing is action and participation; only true participants can seize the opportunities.

When the next opportunity presents itself, don't hesitate, and don't stand on the sidelines waiting for a miracle to happen. Remember, if you don't try, you've already lost the chance for success. We must let go of the fear of making mistakes and take that bold step forward. Only then can we achieve financial breakthroughs and embark on a journey of growth.

On Wall Street, money truly never sleeps. To survive and profit in this ever-changing market, we must learn to make every penny work, wisely calculate the cost of every second, and seize every fleeting opportunity. This is not just the art of investing, but the key to survival.

I want to especially remind all members of the QTM community: this Thursday, we will have the second round of AlphaStream 5.0 testing, and this will be the final testing opportunity! It's a once-in-a-lifetime chance for hands-on experience. Not only will you witness the power and precision of this system,

but you'll also lay a solid foundation for the upcoming trading bootcamp. If you're feeling anxious about the future and want to improve your financial situation, this test could be the turning point that changes your destiny.

Please note, the spots for this test are extremely limited. We will be following a first-come, first-served and priority based on points system for registration. From now on, please contact the assistant immediately to reserve your spot. Don't hesitate—opportunities are only for those who are prepared!

Take action and join our trading boot camp. Let's navigate the sea of investment together, seizing your million-dollar opportunities. Now is the best moment to change your future!

AlphaStream 5.0 Internal Test Learning Plan Transaction Records								
Rules:

Today's crypto market showed significant volatility, yet opportunities were everywhere! According to AlphaStream 5.0, Bitcoin, nearing \$85,000, faced heavy pressure from a wave of trapped short positions. However, the bulls held their ground firmly at this key level, refusing any significant pullbacks. The afternoon market remained choppy, but AlphaStream 5.0 capitalized on the moment, issuing a precise short signal that delivered an astonishing 60% return on a single trade in under 60 minutes!

By analyzing the 5-minute candlestick chart, it became clear that as the Bollinger Band upper limit began to suppress, the MACD formed a high-level death cross. At this pivotal moment, AlphaStream 5.0 decisively issued a short

warning signal, helping us lock in profits and convert market fluctuations into tangible returns.

The first test results of AlphaStream 5.0 have been extraordinary:

- 100% signal accuracy, with every trade hitting its target precisely.
- All 5 trade signals were successful, delivering a total asset return of 74%, far exceeding the anticipated 60% target!

For those participating in the test for the first time, congratulations on seizing this incredible opportunity! Later, please share your profit screenshots to celebrate this exciting achievement together. This was not just a technical victory but also a comprehensive test of our market insight and execution.

Friends, this is just the beginning! AlphaStream 5.0 is unlocking new possibilities for us, and we must ride this momentum to embrace even greater opportunities. Remember, the winners in the market are always those who act decisively and strive for excellence. Now is the time to write your success story!
