Professor Quinlan Sutter (Helmsman)

Weekend Review: U.S. stocks remain in a high-level consolidation, not breaking key points, while the crypto market is adjusting and setting up a great buying opportunity!

Good afternoon, my friends!

I'm Quinlan Sutter, your old friend. In this world, time is the only thing that is fair to each of us. We all have 24 hours a day, and our starting point is the same, the only difference is how we make use of this time. Time is our most precious asset, it doesn't pause, it doesn't look back, and it doesn't give us a second chance. The only thing we can do is to make the most of it and let it serve our dreams.

Each day is a new starting point, a step on the ladder to success. Some choose to waste time, while others go all in, making the most of every minute to achieve greatness. As the Bible says, "Whatever your hand finds to do, do it with all your might." This isn't just an attitude toward work, but toward life and toward investing. Time will not wait for us, it will only reward those who cherish it and are willing to work for it.

The world of investing is the same. Every trade, every decision, is a step toward our future. Those who ultimately achieve financial freedom are not simply lucky by nature; they understand the value of time and know how to use every minute to learn, analyze, execute, and continuously adjust their strategies. They don't waste time on hesitation or anxiety, instead, they create their future through action. To succeed, you must ask yourself: What did I do today to get closer to my goal? Did I make the most of these 24 hours today, laying a solid foundation for my future? Every choice we make today determines the outcome of our future.

This is the power of time. It is the fairest judge and will ultimately allow those who know how to persevere and not give up easily to stand out. On this path of investing, the most frightening thing is not the market's volatility, but the time

you waste in vain. If you keep waiting for the "perfect opportunity," you may never take the first step. And those who are truly successful are the ones who, even before time has proven everything, have already made the firm choice to take action.

Dear friends, opportunities won't wait for you forever, and neither will time. So, stop waiting, stop procrastinating, and take action now! Make the most of your time every day, move towards your dreams, and fight for your future. Let's cherish every moment and make time our strongest ally. No matter how the market fluctuates, as long as we seize time and stick to the right strategies, we will certainly reap the brilliant results that are meant for us in the future. Let's make the most of the rest of our lives, leave no regrets, and fill every day with meaning and hope!

Looking back at our community's "Trading Practical Boots Camp" since its launch, from the Millionaire Club to the Multi-Millionaire Club, the success of each profit challenge has helped many friends reach their million-dollar profit goals ahead of schedule, pushing them towards even greater challenges. And many others are steadily moving forward on this profitable journey, turning each trade into a step towards climbing higher. Time never betrays those who put in

the effort, it's your choices and execution that have created today's achievements.

To those who have already achieved million-dollar profits, congratulations! Your hard work and perseverance have been rewarded in the best possible way. But remember, this is not the end, but a new beginning. As Martin Luther King once said, "We must accept finite disappointment, but never lose infinite hope." The world of investing is always full of challenges, and the market is constantly changing. The true winners are always those who keep progressing and pushing themselves. Now, it's time to set our sights on higher goals and strive for even greater success.

To those who are still on the journey, I want to tell you that investing is a marathon, not a sprint. Success won't come overnight, but every day of persistence brings you closer to your goal than yesterday. As the Bible says, "Strive to enter that rest." Stay firm in your belief and keep working hard, and you will eventually reach the victory's finish line. Newton also said, "Patience and perseverance are the best friends." This is especially true in the world of investing. Don't stop striving before the numbers in your bank account turn into phone numbers. Every investment, every decision, is a step toward success.

No matter what stage you're at right now, remember that your effort and perseverance will eventually be rewarded by time. To those who have already achieved success, keep pushing forward and aim for even higher goals; to those still chasing success, don't get discouraged, keep going, because the future is undoubtedly yours.

Let us all work together, continuously challenging ourselves, breaking through limits, and achieving our dreams, with time as our witness. Investing is not just the accumulation of wealth, but a testament to wisdom and perseverance. May each of us find success and joy on this path, moving toward even greater achievements!

QTM COMMUNITY

From the daily candlestick charts of the Nasdaq and S&P 500, the high-level consolidation trend is still ongoing, and February is likely to be a key turning point for the market. Especially with the monthly candlestick charts of the three

major indices at absolute highs and the RSI approaching 80, it suggests that a market correction could happen at any time. If the indices do not drop and instead continue to consolidate at these high levels, the market's profit potential will remain weak, and investor confidence will be tested.

Meanwhile, Nvidia's monthly-level correction has already started, and it may test the important support level of \$100. Looking back at January 2024, Nvidia's main rally drove the entire AI sector to soar, and whether this adjustment will impact the performance of AI-related stocks is a key point we should closely monitor going forward. This once again confirms the core principle of the stock market: time cycles determine everything. The same stock, bought at different times, will result in vastly different returns.

Investing is not just about choosing the right assets, it's more important to choose the right timing. The market's rise and fall often follow cyclical patterns, not linear growth. If you miss the best entry point, even the highest-quality stocks can become a heavy burden. We need to learn to approach investments like institutional investors, with a big-picture and cyclical mindset, rather than being misled by short-term fluctuations.

The current market signals are very clear, high-level consolidation often indicates that a trend change is near. Therefore, I still recommend that you adopt a more prudent asset allocation strategy: keep 10% of your funds in the stock market, waiting for the right opportunity, and invest the remaining 90% in the crypto market's profit challenge plan. This approach not only helps effectively avoid the potential risks of a stock market correction but also allows you to fully capitalize on the profit opportunities in the crypto market, maximizing the efficiency of your funds.

Smart investors know that liquidity and proper allocation of funds are the key factors in determining returns. In an uncertain market environment, our goal is not to bet on the direction but to always position ourselves on the most favorable side of the market, allowing our funds to work at their fullest potential. Right now, the crypto market is in a period of certain profit potential, while the stock market is consolidating at high levels, with increasing pressure for a correction. Smart capital has already started to shift, and what we need to do is go with the flow and decisively execute the best strategy at the right time.

Compared to the stock market, which is experiencing high-level consolidation and a gradual decline in profit potential, the crypto market is still performing strongly. As shown in the chart above, Bitcoin's daily candlestick chart remains in a high-level consolidation range, and the MACD has formed a death cross at high levels, indicating that the short-term adjustment cycle is still ongoing. Based on the current market rhythm, this adjustment is expected to complete within the next two weeks, which aligns perfectly with our previous analysis.

At the same time, with the Bollinger Bands continuing to narrow, the lower band is likely to open downward, and the market may experience a deeper pullback,

with key attention on the support around \$97,000. If Bitcoin's price has the chance to pull back to around \$90,000, it would present an extremely attractive mid-term buying opportunity. Looking at the longer-term trend, the bull market logic remains unchanged, and this short-term pullback is actually the best opportunity to build momentum for the next rally.

Dear QTM community investment elites, at this moment, I am filled with joy and pride as I witness the remarkable achievements our family has recently created. The total asset returns for VIP3, VIP2, and VIP1 partners have reached impressive +1167.69%, +413.58%, and +222.58%, respectively! This is not just an increase in numbers, but the result of our collective wisdom, execution, and unwavering belief, a perfect demonstration of the magic of compound interest.

Behind every profit figure is your hard work, precise judgment, and relentless effort. We are steadily progressing toward our goals, and based on the current pace, it is expected that by mid-March, more community members will

successfully meet and exceed their set targets, especially VIP3 partners, whose advantage is becoming increasingly evident as they approach the pinnacle of wealth at a faster rate!

However, while celebrating these achievements, we also clearly recognize the value of market timing and precise execution. Trading charts from different cycles constantly signal the optimal buy and sell points, and these opportunities can only be truly captured by those who follow the trading signals closely. If your returns have not yet met your expectations, it's not that the market isn't providing opportunities, but rather whether you have truly given your all and kept up with the rhythm of strategy execution.

Therefore, I strongly urge everyone to boldly increase your asset size under the powerful force of compound interest. Why? Because scaling up not only multiplies your returns, but also allows you to better utilize the trading signals from AlphaStream 5.0, navigating market fluctuations with ease and seizing every important profit opportunity.

At the same time, upgrading to a higher-level VIP partner will provide stronger profit advantages, more accurate trading signals, and higher priority in strategy

execution. As we've seen, the returns of VIP3 partners have far outpaced other levels. This is not just an advantage in strategy, but a significant improvement in capital efficiency.

As time goes by, our goals are constantly expanding, and our dreams are continuously stretching further! Each challenge is an opportunity for us to break through our own limits, and the upcoming week will be a golden moment for us to push the boundaries once again and create astounding returns!

Next week's big data market could very well allow us to achieve over +900% profit in a single trade! Do you remember the last non-farm payroll data event? We accurately captured market movements and made an incredible nearly 600% profit in a single trade. This time, the opportunity will be even more shocking, and 900% could just be the beginning.

Next week, the highly anticipated non-farm payroll report is about to be released, and this is not just a data release, it's our moment to embrace a wealth transition! Market volatility will intensify once again, which means a larger profit potential is forming. What we need to do is prepare in advance, accurately identify the opportunities, and strike without hesitation!

I urge every one of you involved in this wealth battle: please make sure you are fully prepared to seize this once-in-a-lifetime opportunity! Opportunities only favor those who are prepared, do you want to be one of the winners? If, like me, you're excited about next week and eager to capture this extraordinary profit opportunity, then take action now!

DM me your wishes and plans, and let's move forward together, developing strategies and working hand in hand to reach new heights of wealth! Next week, our time is about to begin, let's give it our all and embrace this life-changing battle!

In addition, I would like to specifically remind everyone to pay attention to GEBT, a revolutionary IEO project that deeply integrates blockchain technology with biotechnology. This project is not only at the forefront of technological innovation but also has remarkable market potential.

The subscription progress bar has ultimately reached around 500%, indicating that its market heat far exceeds expectations, and the opening price at launch is expected to reach or even surpass 15 USDT! This historic moment is destined to become the focus of investor attention. For those who have successfully

participated and secured their allocations, let's look forward to GEBT's performance post-launch and seize this once-in-a-lifetime investment opportunity.

This is a groundbreaking breakthrough and an important milestone on our path to higher investment returns! Opportunities always favor those who plan ahead and act decisively. If you've already participated, get ready to embrace the upcoming returns. If you're still observing, now is the time to reassess the immense potential of this industry.

Wishing everyone a great weekend! Let's gear up and give our all in next week's challenge, pushing our investment journey to unprecedented new heights! 🚀🔥
